

HEALTH AND SAFETY POLICY

At Cassidy Construction we deliver full contract construction in the industrial and commercial sectors. We are dedicated to having an effective health and safety management system specific to the nature of our health and safety risks and opportunities.

We are committed to fulfil our legal, and other requirements in the management and delivery of health and safety at work. This includes providing safe and healthy working conditions for the prevention of work related injury and ill health.

We aim to actively manage the health and safety of everyone working with us. This includes our goal to:

- Eliminate hazards and reduce health and safety risk.
- Identify and create awareness of hazards.
- Train our people to identify hazards, assess risks, implement controls and identify opportunities for improvement.

We consult with, and provide opportunities for, our people to participate in all aspects of health and safety management.

We actively foster stakeholder engagement in health and safety by facilitating open communication, collaboration, and participation.

We establish health and safety objectives, in consultation with our people and interested parties, on an annual basis. These objectives are tracked, monitored, and measured by senior management to ensure continual improvement.

Our health and safety policy is reviewed annually and is freely available to all our people through Engage, our health and safety management software system. We also include it:

- On our website.
- In our pre-tender documentation provided to potential clients.
- In our contractor pack.
